LOOKING BACKWARD

In this issue are indexed the articles which have appeared in THE SCIENCES during the past twelve months. The list of titles is an impressive one, and may be compared favorably with science magazines carrying advertising. The pages of THE SCIENCES are full of the latest discoveries and projects of scientists everywhere. The reader can read an up-to-date story without thumbing through pages of extraneous material.

As THE SCIENCES begins its fifth year of publication, won't you support it more than ever by giving gift subscriptions to others who will also enjoy reading its lively and concise coverage of the vanguard of science.
